OVERVIEW

Transformational Technology Leader with over 15 years of experience leading enterprise infrastructure modernization and digital transformation specializing in global financial services and investment firms. Proven success in overseeing and managing global technology infrastructure, ensuring seamless operations, and driving innovation to align IT strategies with business goals. Expert in building and mentoring high-performing IT teams, fostering a culture of collaboration and accountability. Adept at developing resilient, scalable systems, maintaining robust cybersecurity, and optimizing a hybrid multi-cloud footprint to deliver measurable business value and ROI.

PROFESSIONAL EXPERIENCE

McKinsey & Company (MIO Partners)

2023 – Present

Director, Head of IT Operations

Head of IT Operations at MIO Partners, McKinsey & Co.'s Investment Office, an asset and wealth management firm with 23B AUM. Leader of leaders and a key member of technology leadership, responsible for 18+ technologists and MIO's global IT infrastructure and operations, ensuring secure, resilient, and high-performing systems that enable the organization's investment and advisory capabilities. Primary responsibilities include Cloud Operations, Application Support, and End User Support across nine global offices, AWS, and Azure.

- Transformed enterprise IT operations to support divestiture readiness from McKinsey; Partnered with senior leaders in Investments, Risk & Compliance, Finance, Cyber, and Client Service & Advisory to align IT operations with the multi year organizational strategy.
- Reorganized core tech functions to align infrastructure investments with strategic priorities, optimizing a \$12.5M annual tech operation portfolio to maximize ROI and align operating cost with industry peers.
- Drove talent development of 18+ engineers through a blended model of retraining, upskilling, and external hiring, improving engagement and capability across the team. Championed leveraging partners to augment technology transformation to retool exceptional talent and hiring top talent for strategic roles.
- Expanded operational footprint to EMEA with strategic partnerships, staffing key capabilities, and office buildouts to support customer expansion strategy.
- Built an ITSM service desk using ITIL methodology tracking KPIs with executive dashboards, integrated incident management, asset management, and change control.
- Deployed enterprise observability stack with 100% endpoint visibility in 60 days and implemented a rolling release change management strategy reducing defective releases to business critical customers by +95% in six months, increasing the release velocity by +350% in 12 months, and enabled zero day security vulnerabilities remediation in <72 hrs.
- Introduced 24/7 global client support model via strategic partners, reducing time-to-resolution and first response time.
- Partnered with cyber to implement the necessary operational changes to improve NIST CSF score from 2.60 to 3.02 in one year and on track to 3.6+ by 2026.
- Strengthened disaster recovery and business continuity, achieving 15-minute RTO for critical systems and sub-4-hour full restoration multi-region cloud post data centers exit.

Amazon Web Services

2020 – 2023

Sr. Solutions Architect

Enterprise FSI Solutions Architect for Fortune 250 enterprise customers in the financial and insurance space with +\$100M yearly spend, as well as other large-scale global businesses, to design and implement AWS solutions that are scalable, secure, and cost-effective. Working directly with CxOs to drive technology strategy.

TIMOTHY J. MURPHY

410.302.9996

- Partnered with CxO business stakeholders and their cross-functional technical teams, including application developers, TechOps engineers, and PMOs to ensure successful implementation and delivery of business capabilities ran on AWS.
- Participated in large enterprise pre-sales activities, such as creating proposals, conducting proof-of-concept demonstrations, and responding to RFPs for key customer business initiatives.
- Identified customer business requirements and provide guidance on best practices for AWS architecture with a focus in DevOps, Containers, AI & ML, and security.
- Developed customized AWS solutions that meet the customer's needs, leveraging AWS and 3rd Party services using IaC solutions like Terraform, CDK, and CloudFormation.

RADAR

2019 – 2020

Infrastructure Engineer

Lead Infrastructure Engineer at RADAR, a platform as a service startup combining RFID and computer vision AI to automate retail store processes using proprietary hardware and software. Focused on simplifying deployment complexity, accelerating delivery pipelines, and scaling secure infrastructure to support customer integration at national retail chains.

- Engineered and maintained automated CI/CD pipelines in Jenkins for seamless infrastructure and application delivery across hybrid data center, Azure Cloud, and edge GPU devices (Nvidia)
- Managed internal IT stack (GSuite, Zoom, Slack, Trello, 1Password) and network infrastructure (Meraki firewalls, Cisco switches, VPNs), ensuring a secure and high-performance corporate environment.
- Orchestrated scalable deployments using Terraform, Chef, Pulumi, Azure CLI & ARM Templates. Managed and automated infrastructure components including GitHub Enterprise, Jenkins, AAD, Docker, Nginx, Kubernetes, Vault (Hashicorp & Azure), Consul, Prometheus, Grafana, JFrog, and Bind DNS.
- Achieved a ~25% monthly reduction in cloud spend by recalibrating cloud resources to balance performance with cost-efficiency, directly enhancing the company's burn rate management.

PROSPERITY NOW

2017 – 2019

Director of IT

Head of technology, led a team of four to perform an organization-wide IT modernization for a nonprofit dedicated to financial empowerment for low-income households. Partnered with executive leadership to align technology with mission objectives, streamline operations, and fortify cybersecurity.

- Defined and executed a multi-year technology roadmap, aligning infrastructure modernization with business goals to reduce system downtime, enhance security, and future-proof core operations.
- Directed full transition from a legacy data center to Azure, cutting operational overhead, enabling secure remote work, and freeing IT teams to focus on high-impact, mission-aligned initiatives.
- Migrated organizational tools to Microsoft 365, centralizing collaboration through Teams, SharePoint, and Exchange—lowering maintenance burden while improving productivity.
- Oversaw Salesforce customization and governance to enhance data collection, donor tracking, and program efficacy reporting across all service lines.
- Supported mission success through latest machine learning modeling techniques to effectively test predictive models for program work.

A.I. SOLUTIONS

2014 – 2017

Technical Lead, IT

Directed a team of five software engineers delivering enterprise architecture and infrastructure innovation in support of NASA Space Network modernization. Oversaw three engineers managing technical infrastructure hosted at HQ & Azure, multiple remote sites, and end user support for 450+ staff supporting complex mission requirements for NASA, the Air Force, and Army DoD contracts.

- Partnered with executive leadership and facilities teams to drive technology modernization during headquarters relocation, overseeing solution briefings and technical aspects of new facility design.
- Drove business development for cybersecurity-focused government contracts, writing winning proposals based on different security frameworks including NIST 800.

- Developed and maintained strategic vendor relationships, conducting vendor analysis on services, equipment, and products to identify best-fit partnership for enterprise and agencies.
- Modernized Space Network's ground communication software router using python and modern techniques to streamline speed and volume requirements for NASA SCNS contract.
- Implemented rigorous overhaul of network security resources to include firewall, switches, VPN, security appliances, and a wireless infrastructure with 802.1x certificate-based authenticity as lead architect.
- Transformed 125+ physical servers to virtual machines creating virtual and systematic barriers between infrastructure, production machines, and contractual data increasing availability of systems.
- Designed and implemented new disaster recovery site, reducing operational downtime from 2 weeks to less than 4 hours in the case of emergency.
- Enabled high-performance scientific operations by architecting HPC solutions for advanced space flight applications and deploying financial and test systems supporting organizational objectives.
- Spearheaded single sign on login across multiple divisions to a consolidate cloud-based Identity and Access management solution.

CFED

2012 – 2014

Network & Systems Administrator

Architected and deployed multiple networks to replace internal infrastructure in support of business operations at several connected sites. Provided assistance to 60+ users at any given time, reduced RTO and RPO from 24+ hours to 15 minutes. Negotiated new contracts with multiple vendors to reduce costs by over 23% with improved SLA and uptime.

UNITED STATES MARINE CORPS

2004 – 2008

Manager

Led and ensured the welfare, readiness, and discipline of a 13-Marine unit. Planned and executed complex training in urban combat, amphibious assaults, vehicle operations, and weapons systems maintenance. Directed combat missions, coordinating with multiple units on logistics, routes, and resupply strategies. Championed cross-training and operational briefings to ensure mission success and adaptability across diverse operational environments.

EDUCATION

UNIVERSITY OF MARYLAND

Bachelor of Science in Computer Networking & Security

2013

Bachelor of Art in Criminology & Criminal Justice

2011
